Professional Summary

Results-driven Google Workspace and Cloud Solutions Engineer with 7+ years of experience delivering enterprise-scale migrations, governance, automation, and agentic AI solutions. Expert in Advanced GAM, PowerShell scripting, Vertex AI, Anthropic, Grok, and Google Apps Script. Proven ability to build intelligent automation on GCP + Google Workspace that delivers significant time savings, reduces operational risk, and scales across complex multi-project environments. Excels at translating technical complexity into clear business value for enterprise and SMB clients.

Core Competencies

- AI Agents & Intelligent Automation: Vertex AI, Google Agent Builder, Anthropic, Grok, Apps Script, AI-assisted scripting
- Automation & Scripting: Advanced GAM, PowerShell, Python, Google Workspace Admin SDK & APIs
- Google Workspace & Cloud: Governance, IAM, JML, Large-Scale Migrations, CloudM, Resource Hierarchy
- Security & Compliance: FedRAMP, DoD, SSO/SAML/SCIM, DLP, Automated Audits & Reporting
- Technical Advisory: Discovery Workshops, Architecture Design, Stakeholder Presentations, Sales Enablement

Professional Experience

Brio Technologies — GWS Solutions Engineer (IT Collaboration & Platforms)

April 2025 – Present

- Designed, developed, and deployed multiple AI-powered agents using Vertex AI, Anthropic, Grok, Google Agent Builder, and Apps Script, resulting in an estimated 40–60 hours per month of time savings for HR, IT, and sales teams.
- Built and open-sourced a secure AI onboarding/offboarding chatbot on GCP + Google Workspace, gated by dedicated Google Groups (e.g., hr@domain.com). This eliminated the need for repeated Super Admin intervention after initial setup, reducing onboarding cycle time by approximately 70% and enabling self-service access for authorized users.
- Developed agentic workflows that automatically formalize Statements of Work (SOWs) and proposals, draft professional client emails, and generate monthly security audits + daily MFA compliance reports, reducing manual review effort by 15–20 hours weekly.
- Leveraged Advanced GAM and custom PowerShell scripting (with AI assistance) to manage complex, multi-tenant Google Workspace migrations using CloudM. Created an AI-assisted PowerShell batch script that maintains clean organization and tracking across simultaneous projects, significantly reducing errors and lost items in high-volume environments.
- Spearheaded full-stack GWS tenant architecture, OU/directory design, mail routing, and shared drives strategy across SMB clients, reducing permission-related incidents by 85% and saving clients 120 hours per month in manual administration.
- Engineered Okta + Salesforce Identity to GWS SSO/SCIM integration with SAML configuration and automated group sync, achieving 100% hands-off lifecycle management and eliminating \$75K annual manual provisioning costs.
- Led GWS architecture overhaul for a large nonprofit, including SOW scoping, workflow diagrams, and IAM runbooks.

Karcher — Google Workspace Developer (Contract)

February 2025 – April 2025

- Resolved post-O365-to-GWS migration gaps in mail routing, calendar resources, and shared drive permissions, restoring full functionality and preventing \$30K in potential productivity losses.
- Rewrote core business VBA macros in Google Apps Script with configuration-as-code and health monitoring, reducing execution errors by 95% and saving 40 hours per week in manual processing.
- Delivered hands-on admin training and runbooks that enabled internal self-sufficiency, cutting external support dependency by 100% within 60 days.

66 Degrees — Google Workspace Deployment Lead (Contract)

June 2024 – October 2024

- Led two concurrent migration tracks (GWS-to-GWS and GWS-to-M365) end-to-end, including domain consolidations and shared drives strategy, with zero blown cutover windows.
- Authored multi-domain GAM scripts and maintained project state in Jira/GitHub, implementing configuration-as-code that reduced deployment time by 60%.
- Coordinated cross-functional teams and delivered postmortems that improved platform reliability by 40%.

Salesforce — Collaboration Systems Engineer (Contract)

October 2023 – April 2024

- Owned end-to-end GWS security and compliance posture in a FedRAMP High environment, implementing DLP, retention, e-discovery, and access reviews that achieved 100% audit readiness.
- Built GAM + Apps Script + Python automation stack deployed via Heroku for user lifecycle, license reconciliation, and tenant monitoring, saving \$180K annually in operational costs.
- Enforced 2SV policies and reduced security incidents by 75% while maintaining zero downtime.

Pansophic Learning — Google Workspace SME (Contract)

February 2023 – October 2023

- Rebuilt the GWS environment from years of configuration debt, redesigning sharing rules, DLP policies, and resource hierarchy, cutting compliance risk by 90%.
- Automated group management, user audits, and license reporting in PowerShell and Python, removing 25 hours per week from team operations.
- Designed and delivered training programs for admins and end users, reducing support tickets by 65%.

Education

Associates, Network and Systems Administration

ITT Technical Institute, Oxnard, CA — 2015

Certifications

- Google Cloud Professional Administrator
- CloudM Certified
- Google For Education Certified
- Google Education Deployment Credential
- Google Deployment Credential
